

Our Mission Statement

Dingo Servo Mounts were developed as a reliable, low cost method of operating model railway points or turnouts and semaphore signals using freely available 9g servo motors.

Over the development time the following range of parameters were created that the latest mounts satisfy.

- To be a small, easily assembled kit that would be simple to put together
- To utilise cheap model 9g servos like the Hobby King HK15178 , TowerPro SG90, or similar (Now also the Mini range for the PowerHD HD1370A servos)
- To offer a complete linear motion from the rotary servo. (Exception are the Universal Mount and Crossing Gate)
- To be easy to install and operate.
- To be robust and long lasting.(All metal construction)
- To accommodate switches that could be used to indicate position and/or to power frogs, where possible.
- To offer a variety of options for connecting actuator wires or pull rods.

Our Customer Service Aims:

- We aim to keep developing mounts to offer the best in design and functionality.
- We aim to offer quick and efficient service to all our customers.
- We aim to sort out any issues quickly and effectively.
